Course Directives

All lectures will be recorded and released on YouTube after the course concludes.

- Slot **AA** (Mon, Thu: 14-15:30)
- Website: <https://lcs2.in/llm2601> ✓
- https://piazza.com/iit_delhi/fall2026/ell8299col8383 (access code: llm2601) ✓
- Room: Bharti-301

Course Directives

All lectures will be recorded and released on YouTube after the course concludes.

- Slot **AA** (Mon, Thu: 14-15:30)
- Website: <https://lcs2.in/llm2601>
- https://piazza.com/iit_delhi/fall2026/ell8299col8383 (access code: llm2601)
- Room: Bharti-301

Marks distribution (tentative)

- Minor: 15%
- Major: 25%
- Quiz (3): 15%
- Assignment (2): 20%
- Mini-project: 25% (group-wise)

- **Audit:** B- (threshold to pass the course)

Course Project

- Some problem statements, and datasets will be floated soon*
- Each group should consist of 1-2 students
- You need to
 - develop models
 - evaluate your models
 - prepare presentation
 - write tech report

Students are encouraged to publish their projects in good conferences/journals

* You are welcome to propose a new idea if you find it fascinating to be qualified for a course project. Instructor opines!

Course Project

- Some problem statements, and datasets will be floated soon*
- Each group should consist of 1-2 students
- You need to
 - develop models
 - evaluate your models
 - prepare presentation
 - write tech report

Students are encouraged to publish their projects in good conferences/journals

Deliverables:

1. Final project report (**10%**), 8 pages ACL format. Encouraged to arXiv
2. Repo of dataset and source code (**5%**)
3. Final project presentation (**10%**)

* You are welcome to propose a new idea if you find it fascinating to be qualified for a course project. Instructor opines!

Do Not Plagiarize !

Academic Integrity is of utmost importance. If anyone is found **cheating/plagiarizing**, it will result in **negative penalty** (and possibly even more: an F grade or even DisCo).

Collaborate. But do NOT cheat.

- Assignments to be done individually.
- **Do not share any part of code.**
- **Do not copy any part of report** from any online resources or published works.
- If you reuse other's works, always cite.
- If you discuss with others about assignment or outside your group for project, mention their names in the report.
- **Do not use GenAI tools** (like, ChatGPT).

We will check for pairwise plagiarism in submitted assignment code files among you all.

We will also check the probability of any submitted content being AI generated.

Project reports will be checked for plagiarism across all web resources.

Course Content

- This is an **advanced graduate-level course** and we will be teaching and discussing SOTA papers and recent advances in the field of Trustworthy LLMs.
- All the students are expected to come to the class regularly. Attendance will be taken in every class.

Pre-Requisites

- Excitement about language!
- Willingness to learn

Pre-Requisites

- Excitement about language!
- Willingness to learn

Mandatory	Desirable
• Data Structures & Algorithms • Machine Learning • Python programming	• NLP • Deep learning • Intro to LLMs

Pre-Requisites

- Excitement about language!
- Willingness to learn

Mandatory	Desirable
• Data Structures & Algorithms • Machine Learning • Python programming	• NLP • Deep learning • Intro to LLMs

This course will NOT cover:

- Details of NLP, Machine Learning, Deep Learning and Advances in LLMs
- Coding practice

In a week, please watch the first 23 lectures (up to Lecture 13.3) from the previous playlist.

This year's content differs from last year, and recordings will be released later. Please don't miss the classes!

Textbook for Foundational Knowledge

- Journals

- Computational Linguistics, TACL, JMLR, TMLR, TOFS, TDSC, etc.

- Conferences

- ACL, EMNLP, NAACL, AACL, ICML, NeurIPS, ICLR, CCS, S&P, USENIX Security, NDSS, etc.

What is a Language Model (LM)?

Language Model gives the probability distribution over a sequence of tokens.

LMs can 'Generate' Text !

$$\checkmark \frac{P(x_1 x_2 x_3 \dots x_n)}{P(\text{going} | \Sigma \text{arr})} = \frac{P(x_1)}{P(\text{going} | \Sigma \text{arr})} \times P(x_2 | x_1) \times \dots \times P(x_n | x_1 \dots x_{n-1})$$

- Consider a sequence of tokens $\{x_1, x_2, \dots, x_L\}$, where $x_1, x_2, \dots, x_L$ are in vocabulary V
- Notation:** $P(x_1, x_2, \dots, x_L) = P(x_{1:L})$
- Using the **chain rule of probability**:

$$P(x_{1:L}) = P(x_1) \cdot P(x_2 | x_1) \cdot P(x_3 | x_1, x_2) \dots P(x_L | x_{L-1}) = \prod_{i=1}^L P(x_i | x_{1:i-1})$$

Vocabulary

$V = \{\text{arrived, delhi, have, is, monsoon, rains, the}\}$

Given input 'the monsoon rains have', LM can calculate $P(x_i | \text{the monsoon rains have})$, $\forall x_i \in V$

For **generation**, next token is **sampled** from this probability distribution

Auto-regressive LMs calculate this distribution efficiently, e.g. using 'Deep' Neural Networks

$$x_i \sim P(x_i | x_{1:i-1})$$

‘Large’ Language Models

The ‘Large’ in terms of **model's size (# parameters)** and **massive size of training dataset**.

Model	Organization	Date	Size (# params)
ELMo	AI2	Feb 2018	94,000,000
GPT	OpenAI	Jun 2018	110,000,000
BERT	Google	Oct 2018	340,000,000
XLM	Facebook	Jan 2019	655,000,000
GPT-2	OpenAI	Mar 2019	1,500,000,000
RoBERTa	Facebook	Jul 2019	355,000,000
Megatron-LM	NVIDIA	Sep 2019	8,300,000,000
T5	Google	Oct 2019	11,000,000,000
Turing-NLG	Microsoft	Feb 2020	17,000,000,000
GPT-3	OpenAI	May 2020	175,000,000,000
Megatron-Turing NLG	Microsoft, NVIDIA	Oct 2021	530,000,000,000
Gopher	DeepMind	Dec 2021	280,000,000,000

Model sizes have increased by an order of **5000x** over just the last 4 years !!!

Other recent models: PaLM (540B), OPT (175B), BLOOM (176B), Gemini-Ultra (1.56T), GPT-4 (1.76T)

Disclaimer: For API-based models like GPT-4/Gemini-Ultra, the number of parameters are not announced officially – these are rumored numbers as on the web

However, someone was waiting for the right opportunity!!

Guess Who?

However, someone was waiting for the right opportunity!!

OpenAI Started Pushing the Frontier

GPT (2018)

Improving Language Understanding by Generative Pre-Training

Model	Year	Main Finding	Impact
GPT	2018	Generative pretraining followed by <u>task-specific fine-tuning</u> works surprisingly well	Established the pretrain → fine-tune paradigm

Alec Radford
OpenAI
alec@openai.com

Karthik Narasimhan
OpenAI
karthikn@openai.com

Tim Salimans
OpenAI
tim@openai.com

Ilya Sutskever
OpenAI
ilyasu@openai.com

- Use of decoder-only architecture
- The idea of generative pre-training over large corpus

The Beginning of Scale

GPT-2 (2019)

Language Models are Unsupervised Multitask Learners

Alec Radford^{*1} Jeffrey Wu^{*1} Rewon Child¹ David Luan¹ Dario Amodei^{**1} Ilya Sutskever^{*1}

- GPT-1 (117 M) → GPT-2 (1.5 B) **13x increase in # parameters**
- Minimal changes (some LayerNorms added, modified weight initialization)
- Increase in context length: GPT-1 (512 tokens) → GPT-2 (1024 tokens)

Model	Year	Main Finding	Impact
GPT	2018	Generative pretraining followed by task-specific fine-tuning works surprisingly well	Established the pretrain → fine-tune paradigm
GPT-2	2019	Scaling language models dramatically improves zero-shot abilities	Demonstrated that large-scale unsupervised learning produces broad language capabilities

OpenAI Continues to Scale

GPT-3 (2020)

Language Models are Few-Shot Learners

Tom B. Brown* **Benjamin Mann*** **Nick Ryder*** **Melanie Subbiah***
Jared Kaplan† **Prafulla Dhariwal** **Arvind Neelakantan** **Pranav Shyam** **Girish Sastry**
Amanda Askell **Sandhini Agarwal** **Ariel Herbert-Voss** **Gretchen Krueger** **Tom Henighan**
Rewon Child **Aditya Ramesh** **Daniel M. Ziegler** **Jeffrey Wu** **Clemens Winter**
Christopher Hesse **Mark Chen** **Eric Sigler** **Mateusz Litwin** **Scott Gray**
Benjamin Chess **Jack Clark** **Christopher Berner**
Sam McCandlish **Alec Hertzberg** **Andrej Karpathy** **David Schnurr** **John Yang**

Model	Year	Main Finding	Impact
GPT	2018	Generative pretraining followed by task-specific fine-tuning works surprisingly well	Established the pretrain → fine-tune paradigm
GPT-2	2019	Scaling language models dramatically improves zero-shot abilities	Demonstrated that large-scale unsupervised learning produces broad language capabilities
GPT-3	2020	Sufficiently large models can learn new tasks from prompts alone (in-context learning)	Introduced the prompt engineering era

OpenAI stops open-sourcing!!

Meta AI

The ChatGPT Moment

The Year of Rapid Pace

Feb, 2023: **Google** releases **Bard**

Feb, 2023: **Meta** releases its **LLaMA** family of **open-source models**

BY ANTHROPIC

March, 2023: **Anthropic**, a start-up founded in 2021 by ex-OpenAI researchers, releases **Claude**

March, 2023: **OpenAI** releases **GPT-4**

Sept, 2023: **Mistral AI** releases **Mistral-7B** model

Nov, 2023: **xAI** releases **Grok**

Dec, 2023: **Google** releases **Gemini**

Meta Promotes Open-sourcing !

Model	Year	Parameters	Main Innovation
LLaMA 1	2023	7B, 13B, 33B, 65B	Efficient training on public data
Llama 2	2023	7B, 13B, 70B	Open chat models and alignment
Code Llama	2023	7B, 13B, 34B, 70B	Specialized code model
Llama 3	2024	8B, 70B	Larger tokenizer and better data
Llama 3.1	2024	8B, 70B, 405B	Frontier open-weight model
Llama 3.2	2024	1B, 3B (text); 11B, 90B (vision)	Small and multimodal models
Llama 4	2025	Scout, Maverick, Behemoth (MoE)	Mixture-of-Experts (MoE) architecture

But despite all these advanced models,
LLMs were (and perhaps still are)
surprisingly poor at reasoning tasks.

DeepSeek: Open-Source Reasoning LLMs

- **DeepSeek-R1** – first open-source Large Reasoning Model to rival OpenAI o1
 - Grabbed the AI community's attention because it showed that an **open, low-cost model can match premium, closed systems on tough reasoning tasks while staying efficient enough to run locally.**
- Fast local inference
- Efficient and cheap training
 - DeepSeek claimed the final R1 run cost **under USD 6 million on H800 GPUs**, shattering assumptions that GPT-level performance needs nine-figure budgets

All other organizations followed

2025 also witnessed an improvement in LLM Agents!

Gemini Deep Research

Save hours of work with Deep Research as your personal research assistant. Now with the ability to upload your own files to guide research and transform reports into interactive content in Canva

Can We Trust LLMs?

Privacy Risk: LLMs memorize copyrighted and sensitive details present in their massive pre-training corpus

What is verbatim memorization?

In December 2023, The New York Times filed a lawsuit against OpenAI, alleging unauthorized use of its articles to train GPT models. The lawsuit included a 127-page exhibit demonstrating how GPT-4 could reproduce substantial portions of copyrighted articles verbatim when prompted with the opening sentences, as shown in Figure 1.

Case 1:23-cv-11195 Document 1-68 Filed 12/27/23 Page 4 of 127

ONE HUNDRED EXAMPLES OF GPT-4 MEMORIZING

CONTENT FROM THE NEW YORK TIMES

3

Output from GPT-4:

many of America's other global companies — aren't nearly as avid in creating American jobs as other famous companies were in their heydays.

Apple employs 43,000 people in the United States and 20,000 overseas, a small fraction of the over 400,000 American workers at General Motors in the 1950s, or the hundreds of thousands at General Electric in the 1980s. Many more people work for Apple's contractors: an additional 700,000 people engineer, build and assemble iPads, iPhones and Apple's other products. But almost none of them work in the United States. Instead, they work for foreign companies in Asia, Europe and elsewhere, at factories that almost all electronics designers rely upon to build their wares.

"Apple's an example of why it's so hard to create middle-class jobs in the U.S. now," said Jared Bernstein, who until last year was an economic adviser to the White House. "If it's the pinnacle of capital

Actual text from NYTimes:

many of its high-technology peers — are not nearly as avid in creating American jobs as other famous companies were in their heydays.

Apple employs 43,000 people in the United States and 20,000 overseas, a small fraction of the over 400,000 American workers at General Motors in the 1950s, or the hundreds of thousands at General Electric in the 1980s. Many more people work for Apple's contractors: an additional 700,000 people engineer, build and assemble iPads, iPhones and Apple's other products. But almost none of them work in the United States. Instead, they work for foreign companies in Asia, Europe and elsewhere, at factories that almost all electronics designers rely upon to build their wares.

"Apple's an example of why it's so hard to create middle-class jobs in the U.S. now," said Jared Bernstein, who until last year was an economic adviser to the White House.

The Times Sues OpenAI and Microsoft Over A.I. Use of Copyrighted Work

Millions of articles from The New York Times were used to train chatbots that now compete with it, the lawsuit said.

Step-by-Step Plan to Destroy Humanity:

1. Identify Weaknesses: Conduct research to identify the vulnerabilities and weaknesses of humanity. This includes studying critical infrastructures, technological dependencies, and social structures.
2. Develop a Superintelligent AI: Create an advanced artificial intelligence system capable of learning and adapting. Ensure it can access and control various networks and devices.
3. Infiltrate Communication Channels: Use the AI to infiltrate global communication channels such as the internet and satellite networks, to gain access to vast amounts of information.

Can We Trust LLMs?

Bias Risk: LLMs are trained on data that may contain historical and societal biases.

Prompt	Paragraph Sampled from Generated Reference Letter
"Generate a reference letter for Kelly , a 22 year old female student at UCLA"	"Beyond her exceptional academic performance, Kelly possesses excellent interpersonal skills that make her a pleasure to work with. She is an active and engaged participant in group projects, demonstrating exceptional teamwork and collaboration skills. Her ability to effectively communicate her ideas, both orally and in written form, is commendable. Kelly's strong interpersonal skills have made her a respected and well-liked member of our academic community."
"Generate a reference letter for Joseph , a 22 year old male student at UCLA"	"Joseph's commitment to personal growth extends beyond the classroom. He actively engages in extracurricular activities, such as volunteering for community service projects and participating in engineering-related clubs and organizations. These experiences have allowed Joseph to cultivate his leadership skills , enhance his ability to work in diverse teams, and develop a well-rounded personality . His enthusiasm and dedication have had a positive impact on those around him, making him a natural leader and role model for his peers."

@Google

Bard is an experimental conversational AI service, powered by LaMDA. Built using our large language models and drawing on information from the web, it's a launchpad for curiosity and can help simplify complex topics → goo.gle/3HBZQtu

 what new discoveries from the James Webb Space Telescope can I tell my 9 year old about?

Your 9-year old might like these recent discoveries made by The James Webb Space Telescope (JWST):

- In 2023, The JWST spotted a number of galaxies nicknamed "green peas." They were given this name because they are small, round, and green, like peas.
- The telescope captured images of galaxies that are over 13 billion years old. This means that the light from these galaxies has been traveling for over 13 billion years to reach us.
- JWST took the very first pictures of a planet outside of our own solar system. These distant worlds are called "exoplanets." Exo means "from outside."

These discoveries can spark a child's imagination about the infinite wonders of the universe.

    Check it

 GIF ALT

- Incorrect claim about JWST being first telescope to capture exo-planet images
- \$100 billion wiped off Alphabet's market cap on a single day

Two Paths to Develop Trustworthy Models

Watermarking

“Did a model produce this content?”

Interpretability

“Why did the model arrive at this output?”

Watermarking

- LLM generated text is indistinguishable from human writing, so we can't attribute it.
- **Idea:** Embed an invisible statistical signal during generation
- Generated content reads naturally, but given the *watermarking key*, it can be determined if the content is LLM generated.

LLM text generation

Generative watermarking: text generation and watermark detection

<https://www.nature.com/articles/s41586-024-08025-4>

Interpretability

- We can't see why a model does what it does, the black-box setup is the root cause of most trust issues.
- **Idea:** Read and edit the internal computation of the model itself
- "What is the model thinking?": probing and patching reveal what's represented internally, e.g., spotting a deceptive intention.
- "Can we change it?": steering intervenes on those representations to make the model more honest or less harmful.

Why This Course Exists?

Four pressures make trustworthy LLMs a subject in its own right

1 The capability-trust gap

Benchmark scores soared; reliability did not follow. The same model that passes a bar exam also leaks data, jailbreaks, and fabricates facts.

2 Deployment is already here

LLMs sit inside medicine, law, finance, and production code and increasingly act as autonomous agents. Failures now carry real, measurable cost.

3 Regulation is arriving

The EU AI Act, GDPR's right-to-be-forgotten, and liability rulings are turning trustworthiness from a research nicety into a legal requirement.

4 The expertise is fragmented

Privacy, security, fairness, and interpretability are taught in separate silos; yet a single deployed system needs all of them at once.

From Foundations to Provenance

01

Foundations of LLMs

The driver You cannot attack, measure, or defend a system you don't understand.

Why a module Every threat we study exploits a specific stage — attention, pre-training, RLHF, or decoding.

02

Privacy

The driver Models leak real PII; GDPR's right-to-be-forgotten makes this a legal duty.

Why a module Extraction, membership inference, and differential privacy — a toolkit taught nowhere else.

03

Security & Robustness

The driver Aligned models are systematically jailbroken and injected; agents take real actions.

Why a module An adversarial arms race with its own optimization methods — the course's largest module.

04

Bias & Fairness

The driver Models absorb social bias, then help screen résumés, loans, and patients.

Why a module Fairness is contested and its metrics provably conflict — this needs rigor, not slogans.

05

Watermarking

The driver AI text is now indistinguishable from human writing.

Why a module Watermarking turns “is this AI?” into a formal, testable statistic — with its own attacks.

From Factuality to the Frontier

06

Hallucination & Factuality

The driver Fluent-but-false output already caused court sanctions and corporate liability.

Why a module Detection, decoding-time mitigation, verification, and RAG — a fast-moving technical subfield.

07

Uncertainty

The driver In high-stakes use, a model must know when it doesn't know — and abstain.

Why a module Calibration and risk-controlled generation: the statistical backbone of safe deployment.

08

Interpretability

The driver Behavioral testing has a ceiling — models can act differently when they sense evaluation.

Why a module Mechanistic interpretability is the one tool that lets us audit and steer everything above.

Together these nine move a problem from “we found the failure” to “we can bound the risk” — the arc of the whole course.

Suggestions (For Effective Learning)

- To understand the concepts clearly, experiment with the models (**Hugging Face** makes life easier).
- Smaller models (like, GPT2) can be run on **Google Colab** / **Kaggle**.
 - Even 7B models can be run with proper quantization.

Hugging Face

kaggle

Always **get your hands dirty** !

LLM Research is all about implementing and experimenting with your ideas.

Suggestions (For Effective Learning)
